Level 2 — Medium sort (M) — 1DArray

Write a program to sort an array in descending order.

Sample Input:

Enter number of elements: 5

Enter elements: 4 2 9 1 5

Sample Output:

Sorted array: 9 5 4 2 1

Your Code

```
1 #include <stdio.h>
2
3 int main() {
4     int n;
5     printf("Enter number of elements: ");
6     scanf("%d", &n);
7
8     int arr[n];
9     printf("Enter elements: ");
10    for (int i = 0; i < n; i++) {
11        scanf("%d", &arr[i]);
12    }
13
14    for (int i = 0; i < n - 1; i++) {
15        for (int j = 0; j < n - i - 1; j++) {
16            if (arr[j] < arr[j + 1]) {
17                int temp = arr[j];
18                arr[j] = arr[j + 1];
19                arr[j + 1] = temp;
20            }
21        }
22    }
23
24    for (int i = 0; i < n; i++) {
25        printf("%d ", arr[i]);
26    }
27    printf("\n");
28    return 0;
29 }
```

Program Input (stdin)

Enter input if required...

Output

```
Enter number of elements: Enter elements:
Sorted array: 9 5 4 2 1
```

Q1 CO4 - AT2 - CASE STUDY

25 marks

A large enterprise resource planning application is built from multiple source files, including modules for sales, inventory, and finance, and all of these modules must reference a common variable that stores the current fiscal year. The variable is defined once in one source file but must be read and, in some cases, modified by functions compiled separately in other source files. Without proper declaration, each module would either fail to compile or maintain its own inconsistent copy of the fiscal year. The design must ensure a single, consistent value is shared across the entire application.

Question: Identify which storage class allows the fiscal-year variable to be accessed across multiple source files, and explain the role of extern in achieving this shared access.

Your Code

```
1 #include <stdio.h>
2
3 int fiscalYear = 2024;
4
5 void updateFiscalYear(int year) {
6     fiscalYear = year;
7     printf("Fiscal year updated to: %d\n", fiscalYear);
8 }
9
10
11 // sales.c
12 #include <stdio.h>
13
14 extern int fiscalYear;
15
16 void printSalesReport() {
17     printf("Sales Report - Fiscal Year: %d\n", fiscalYear);
18 }
19
20
```
